

Computer Science undergraduate with a background in Data Science and Artificial Intelligence, building hands-on experience in data engineering through projects involving ETL pipelines, data modeling, and scalable data systems. Proficient in Python, SQL, and modern data tools. Strong foundation in analytics and machine learning concepts, with an interest in building efficient data infrastructure for applications.

EDUCATION

VNU-HCM INTERNATIONAL UNIVERSITY

Bachelor of Computer Science

Ho Chi Minh City, Vietnam

2024 - 2028 (Expected)

- GPA: 3.38 / 4.00

PROJECTS

Data Infrastructure & Engineering

Canyon - Chicago Crime Pipeline

March 2026 - June 2026 

Tools: PySpark, Apache Airflow, dbt, PostgreSQL/PostGIS, MinIO, FastAPI, React, TypeScript, Docker

- Built an end-to-end data pipeline processing 51,996 Chicago crime records (2019 - 2025) using a Medallion architecture and PostgreSQL star schema.
- Orchestrated automated ingestion, transformation, validation, and warehouse loading through 5 Apache Airflow DAGs with Great Expectations data quality checks.
- Developed a FastAPI + React analytics platform featuring PostGIS spatial queries, Redis caching, and interactive crime trend visualisations.

Machine Learning

Catalyst – House Price Prediction (Vietnam Real Estate)

September 2025 – February 2026 

Tools: BeautifulSoup4, Numpy, Pandas, Matplotlib (Seaborn), underthesea, Scikit-learn, LightGBM, XGBoost, CatBoost, Streamlit

- Built a machine learning pipeline for Vietnamese house price prediction using 66,912 scraped BatDongSan.vn listings, including data collection, preprocessing, feature engineering, and EDA.
- Evaluated ensemble and gradient-boosting models, achieving RMSE ≈ 0.783 and $R^2 \approx 0.47$ through stacked ensemble learning.

ThreatLensAI – Cyber Threat Intelligence Platform

May 2026 - June 2026 

Tools: Python, FastAPI, SQLAlchemy, PostgreSQL, scikit-learn, XGBoost, LightGBM, MiniLM, Docker

- Built a cyber threat intelligence platform integrating 13+ security data sources via asynchronous FastAPI services, PostgreSQL, and Docker constructions.
- Developed ML-based classification pipelines for IPs, domains, CVEs, and OTX datasets using XGBoost, LightGBM, Logistic Regression, and MiniLM, achieving up to 0.92 Macro F1 with SHAP-based explainability and multi-source risk scoring.

SKILLS

- **Programming Languages:** Python, SQL, Java (educational)
- **Data Engineering:** Apache Airflow, PySpark, dbt, S3-compatible object storage (MinIO), PostgreSQL/MySQL
- **Machine Learning & AI:** Numpy, Pandas, Matplotlib (Seaborn), Scikit-learn
- **DevOps:** Git/Github, Docker, Ubuntu (Linux)
- **Language:** English (Advanced)
